

ENGINEERING SERVICES

It's Not Just a Job – SBS Ayrshire Provides a Solution

Established in 1996, SBS Ayrshire has gained a reputation for being able to deliver a diverse range of engineering services, sales and solutions to its clients and customers. The company operates across a range of industrial and commercial business sectors but it is to the whisky industry that it turns for a large part of its core business.

Over the years SBS Ayrshire has provided its full range of engineering services and sales to many of the large and smaller

names in the whisky industry, helping them augment their existing engineering capabilities allied to a company that is comfortable with the provision of a full range of turnkey operations (see Panel One).

Services at Glenmorangie involved efficiently removing and relocating storage vats (see Panel Two). SBS ensured safe packing and loading into transport.

Panel One: SBS Completes Loch Lomond Distillery Project

Following an extensive rebuild, the SBS team has just completed a turnkey project for Loch Lomond Distillery which involved the removal of eight redundant vessels and the installation of eight brand new stainless steel storage tanks. The project was completed in its entirety by SBS including all the procurement and installation of equipment from the tanks themselves to the CIP cleaning systems and stainless steel number plaques. SBS also managed the entire logistics operation ensuring timely delivery of the new tanks and minimising production down-time. The project is a key part of Loch Lomond Distillery's capital expenditure programme for 2010/2011 and will help it to realise future production targets.

Several items were relocated to Tain and Islay for the client. Any remaining surplus items were purchased by SBS Ayrshire.

Sales of Equipment

SBS Ayrshire has available at any one time an extensive stock of industrial equipment and machinery. This stock of equipment is turned over on a regular basis and the company is constantly on the lookout for new or used equipment across the whole range of industrial and commercial sectors.

The company is also tapped into a wide array of stockists of both new and used equipment, who can be used as an extension of the company's own stock, giving an even greater range of possibilities of acquiring equipment or machinery to match a customer's needs

Decommissioning, Dismantling, Machinery Removal and Re-installation

Having at hand an experienced and technically adept team of engineers SBS Ayrshire can provide a full decommissioning and dismantling service. Equipment being dismantled in a manner, which

allows straight forward removal and reassemble to a new owners' specification. In addition, with the enhancement of the range of skills and competencies the company can also offer a full plant and equipment decontamination service. This includes the provision of a technically competent waste management service.

SHE Consultancy

The company, through the professional capabilities of its own in-house SHEQ Manager, is also in a position to offer to its clients a complete SHE Consultancy Service. In particular the SBS SHEQ Manager has particular technical management capabilities in the field of Environmental Management. □

Panel Two: SBS at Glenmorangie, Broxburn

SBS Ayrshire recently completed an eight months project for Glenmorangie at the distillers Broxburn site. SBS purchased a complete spirit filling line and over 40 VATS from Glenmorangie. The tanks included space saving vats, glass lined tanks, GRP tanks, and 50,000-62,000L capacity tanks. All items were marketed by SBS and sold on to several customers. After efficiently removing all items, SBS ensured the safe packing and loading of the filling equipment and storage vessels onto transport. SBS also relocated and reinstalled several items to Tain and Islay for the client.
